QLot in Dutch On-line Technology and Operation Procurement

MÄRSTA, Sweden (September 17, 2007) -- [QLot Consulting](#) is supporting both [De Lotto](#) and [Staatsloterij](#), the two leading Dutch lotteries, in their procurement for new on-line technology and operation thereof. The procurement aims at bringing the most modern technology to the respective lottery, including integrated support for all modern sales channels and operational procedures.

On September 14, upon expiration of the proposal due date, 3 proposals were received from the leading lottery system suppliers [GTECH Corporation](#), [INTRALOT](#) and [Scientific Games International](#).

The procurement includes requirements for a mix of complex requirements for technology, products and services for the respective lottery. QLot Consulting has assisted the lotteries in the preparation of the procurement and will continue to provide its independent lottery expertise throughout the procurement process.

The announcement of the apparent successful bidder is expected on January 29, 2008.

“We are pleased to have been able to assist these two very competent and successful lotteries in obtaining as many as 3 competitive bids. This is indeed an achievement in a marketplace where lotteries often have to make do with 1 or 2 bids, the UK being the latest example having received only 2 bids”, says Ales Kulich, President of QLot Consulting.

About QLot Consulting (www.QLot.com)

QLot Consulting AB is a Swedish corporation with offices in Europe (Sweden, Czech Republic and Austria) and in North America (RI, USA). The Group was established in 1998 and consists of Principal Consultants having thorough hands-on experience of all aspects of a lottery's business. QLot provides its international clients with independent lottery consulting in all legislative/regulatory as well as technical and commercial areas, especially where computerized systems and/or agent networks are used.
